CSS3 Specialist Lab 6

Andrew Snyder-Spak
LearnToProgram.TV

For this sixth lab, you will be writing CSS code to style the HTML code at the bottom of this form. After styling your code, you will need to use the Android emulator we went over in the video lectures to fully test your code. You should style your code in the following ways:

1. On screens that are 480px wide or less, the background color should be "yellow".
2. On screens that are larger than 480px wide, but less than 1001px wide, the background color should be "lightgreen".
3. For screens that are 1001px wide and larger, the background color should be "lavender".
4. The image (<img>) tag's height should always be equal to 50% of the viewport's height, and the image tag's width should always be equal to 50% of the viewport's width.
5. Test your site out on several different emulated devices to make sure everything is functioning correctly on each different device.

NOTES:
-You may add your CSS code to your HTML with whichever method or methods you prefer. (External CSS, Internal CSS, Inline CSS)
-You can use whatever image file you would like, but make sure you change the file name in the HTML. Where it has "IMAGE.jpg" should be changed to the name of the image file you want to use.
-If you get stuck, feel free to go back and rewatch the video lectures. If you really can't solve you issues, don't worry because the next video will be the "Lab 6 Solution Video" where I will go over one possible solution line by line so that you can see where you made your mistake.

When viewed in the web browser, your completed Lab 6 should look similar to the screenshot below:

HTML CODE:

```
<!DOCTYPE html>
<html>
<head>
    <title>Lab 6</title>

</head>

<body>
    <h1>Welcome to my website!</h1>
        <img src="IMAGE.jpg">
    <p>This is some sample text for my website.</p>
</body>
</html>
```
